Hugo Guitton

Full-stack Rails Developer

hugo@guitton.dev hugo.guitton.dev github.com/hguitton France

About

I'm a freelance Rails developer based in France with nearly a decade of experience shipping web applications end-to-end, from backend to interface. I lean on Rails conventions and Hotwire (Turbo + Stimulus) to build reactive, polished interfaces. Increasingly I bring applied AI into that work: assisted workflows to ship faster, and LLM features held to the same test discipline as the rest.

Experience

Rails Freelance Developer — Independent

2018 – Present

REMOTE

Working with startups and product teams (sports, booking, marketing, hospitality) to build, evolve, and rescue Rails applications, from a fast MVP to a drifting project that needs steadying.

Full-stack Rails Developer — Phiture

2021 – 2026

REMOTE

B.Layer: a no-code mobile experience design tool that lets CRM and lifecycle teams create advanced in-app messages without developer support.

- Drag-and-drop editor and component system that non-technical teams rely on to assemble multi-screen campaigns.
- Front-end with Hotwire + ViewComponent + Tailwind, favoring server-rendered pages.

Junior Rails Developer — Luvotels

2018 – 2019

REMOTE

First role. Learning the Rails fundamentals (conventions, the safety of a solid test suite) on reservation systems where availability, timing, and concurrency actually mattered.

- Reservation systems handling complex slots and timezones.
- Stripe integration: treating money paths as code that has to be right, proven by tests.

Projects

Operf — SaaS

2025

A basketball scouting platform that lets clubs build and maintain their own player databases, tracking prospects, monitoring performance, and centralizing scouting intelligence in one place.

Sloty — Side project

2026

An online booking platform built for small service businesses, enabling them to accept and manage customer appointments directly through their own booking pages.

RadarHQ — SaaS

2026

A platform that brings error tracking and uptime monitoring into a single interface, with exception grouping, HTTP health checks, and targeted alerts for engineering teams.

Skills

LANGUAGES	Ruby · PHP · JavaScript · TypeScript · SQL · HTML · CSS
FRAMEWORKS	Ruby on Rails · Laravel · Hotwire (Turbo + Stimulus) · ViewComponent · Tailwind CSS
PLATFORMS	PostgreSQL · Redis · Solid Queue · Solid Cache · Kamal · Docker
PRACTICE	Minitest · RSpec & FactoryBot · Service objects · Performance tuning · API design
TOOLING	Git · GitHub Actions · CI/CD · Stripe · Liquid
AI	Claude Code · AI-assisted development · LLM integration · Claude & OpenAI APIs

Other

LANGUAGES	French — native · English — fluent · Spanish — basics
AVAILABILITY	Remote-first · Open to freelance work
